

Summarization 2017

Option One: Self Sufficient

Tenant does not want a summarization. During splashing of their boat, the tenant MUST drive the boat. RVM will help, but will not drive the boat, charge batteries, test systems, etc.

Option Two: The Check-up \$140.00

Includes: Checking the fluids, checking the tires, charging the battery, starting up the boat/running engine, testing the systems and the auto bilge. Also includes splashing and tying boat up in the slip. **(1 hour of labor)**

Option Three: The Works \$205.00

Includes: Checking fluids, checking the tires, charging the battery, starting up the boat/running engine, testing the system, including and the auto bilge. Lake testing the boat, running at speed. Testing the systems while under way- depth finders, gauges, etc. Recording speed and RPM's for future reference. Tying the boat in its slip, covering boat if applicable, and returning the boat keys to the store. **(1.5 hours of labor)**

Due to several days of below freezing temperatures this winter, batteries probably did not do well if they were left in the boat.
